EXTERIOR

GRANITE

A coarse, grainy textured igneous stone, Granite can be found all over the world with its colour ranging from white to pink or grey depending on its mineral composition. Formed through a lengthy process of cooling and solidification of molten lava, Granite is an extremely strong material, particularly suited for outdoor paving and cladding purposes.

Granite is a low porosity and high density stone that can withstand harsh weather, stains and scratches. Pavers made of this natural material are a great choice for high traffic areas, such as driveways, especially in wetter or colder environments.

Granite is also incredibly well suited for large scale commercial projects where high slip resistance and safety standards are a must.

On an aesthetic perspective, Granite is often chosen for its sleek neutral or cool grey and black tones, which pair well with traditional builds as well as industrial, urban environments.

Our Granite range is sourced directly from the quarries to ensure our standards in quality and durability are met on a consistent, reliable basis.

We supply a wide range of Granite products and paving options but we're also able to supply custom orders upon request.
